

Environmental Policy

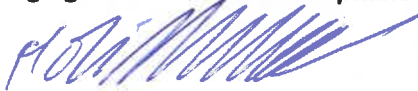

Pulp Friction Limited is committed to reducing the impact on the environment of its operations. Concern for the environment will be a fundamental part of decision making in all aspects of the Company's activities, including investment in machinery, our commercial partnerships and the way we ultimately operate our activities

Our business endeavours to carry out all measures reasonably practicable to provide adequate resources to meet or exceed environmental standards, and to continually improve environmental performance through;

- Minimise waste production by evaluating operations and ensuring they are as efficient as possible.
- Minimisation of material and energy wastage
- Source, design, manufacture and distribute their services in ways that contribute to lowering energy usage, carbon emissions and waste throughout the entire supply chain.
- Use waste or recycled material as their raw material, where practicable.
- Actively promote recycling and use of renewable materials both internally and amongst our customers and suppliers.
- Actively support our customers and suppliers improve the quality of recycling presented for processing.
- Prevention of pollution
- Meet or exceed all the environmental legislation that relates to the Company.
- Lower their carbon emissions through reducing energy usage and raising the energy efficiency of their operations.
- Apply risk management techniques to identify and mitigate environmental risks and impacts.
- Consider key suppliers' environmental policies and credentials as part of the process for their evaluation and selection.
- Monitor and report, internally and externally, the environmental impact of the Company's operations.
- Strive for continuous environmental improvement through the setting and reviewing of objectives and targets.

The business which is an established recycling company is accredited to BS EN ISO 14001 and has been since 22nd November 2018.
